## EDUCATION

### Haldia Institute Of Technology

*Master of Computer Applications | CGPA: 9.53*

Haldia, WB

2024 – 2026

### Global Group of Institutions

*Bachelor of Computer Applications | CGPA: 8.64*

Haldia, WB

2021–2024

### Lakshya High School (H.S.)

*Higher Secondary (WBCHSE) | Percentage: 76.8*

Mahishadal, WB

2021

## TECHNICAL SKILLS

**Languages:** Python, C, Java, SQL, JavaScript

**Frameworks:** FastAPI, Flask

**Frontend:** HTML5, CSS3

**Developer Tools:** Git, VS Code, PyCharm, Eclipse

**Libraries:** Pandas, NumPy, Matplotlib

**Database:** MySQL

## PROJECTS

### Deepfake Detector and Video Summarization | *Python, FastAPI, openCV*

- Developed an AI-powered web application to detect deepfake images/videos and generate intelligent summaries from CCTV footage
- Built a responsive frontend using React.js and Tailwind CSS, enabling secure media upload and an interactive forensic dashboard
- Built a FastAPI backend that accepts image and video uploads, analyzes them using AI models, and sends the results to the React-based dashboard
- Used OpenCV for face extraction, image preprocessing, frame extraction, and video processing
- **GitHub:** [github.com/kekadinda1/deepfake-detector](https://github.com/kekadinda1/deepfake-detector)

### Flight Price Prediction System | *Python, Flask, Scikit-learn, Vercel, Render*

- Developed a full-stack machine learning web application to predict flight ticket prices based on user travel details using a trained Scikit-learn regression model
- Built a responsive React frontend integrated with a Flask REST API and deployed the application using Vercel (Frontend) and Render (Backend)
- Implemented an end-to-end machine learning workflow including data preprocessing, model training, REST API integration, and Git-based version control
- **Live Demo:** <https://flight-price-prediction-using-ml.vercel.app> • **GitHub:** [Repository](#)

### Smart Retail Billing | *Python, openCV, MySQL*

- Developed a Barcode-Based Retail Billing System to enable fast and accurate product scanning
- Automated invoice generation and bill printing, reducing manual billing effort and checkout time
- Implemented barcode scanning for instant product identification and price retrieval.
- **GitHub:** [github.com/kekadinda1/dSmart-Retail-QR-Billing](https://github.com/kekadinda1/dSmart-Retail-QR-Billing)

### Productivity Dashboard | *HTML, CSS, JavaScript*

- Developed a Productivity Dashboard web application with an interactive user interface
- Deployed the application on Vercel for live access
- **Live Demo:** <https://productivity-dashboard-one-beta.vercel.app> • **GitHub:** [Repository](#)

## ACHIEVEMENTS

- Secured **Global Rank 4958** in **TCS CodeVita**, demonstrating strong problem-solving and coding skills [Link](#)
- Python professional Certificate provided by OpenEDG Python Institute [Link](#)
